

I'm not robot!

The MegaBoost Charger/Maintainer 4000 is perfect for those wanting to charge and maintain their 6v or 12v lead acid battery. Diagnosis: Checks for proper battery connection (polarity) and for internal battery damage causing a short. Detects the battery voltage (6V or12V). Tests the battery to determine whether it is good or dead. Bulk Charge: For 6V battery: Charges with constant current of 2A. For 12V battery: Charges with constant current of 2A or 4A (Determined by user). Absorption: Using a constant high current for extended periods of time increases the risk of damaging the battery. To help eliminate the risk, a constant 1.5A (rated) low charging current (output) is given until the battery is fully charged (13.6V±0.2V), then the output is turned off. Maintenance: The charger monitors the battery voltage. If the battery voltage falls below 12.8V±0.2V for a 12V battery or 6.2V ±0.2V for 6V battery, the charger will restart output to charge the battery at about 1A current until fully charged then the output is turned off. The maintenance charging cycle is repeated to keep the battery in good condition when it is not in use and enables the charger to be left connected indefinitely. Recovery: Use the Recovery Mode for 12V batteries with voltage lower than 8V (the battery should not be completely dead). Recovery Mode charges at a constant 1.5A (rated) low charging current (output) to recover the battery. The recovery process terminates when the voltage reaches 10.5V ± 0.25V, and then it switches over to regular charging mode. Features: Fully Automatic - Detects 6v or 12v battery and switches from "charge mode" to "maintenance mode" when the battery is fully charged Easy to read LED lights indicate power on, 6v or 12v mode, 2 amp or 4 amp charge rate, and battery charge status 2 amp charge rate for 6v battery Select between 2 amp or 4 amp charge rate for 12v battery Overcharge and Short Circuit Protection Includes quick disconnect Battery Terminal and Alligator Clip leads for ease of use Safe for use on all 12v Lead Acid type batteries including, Conventional Flooded (wet), Factory Activated Maintenance Free (MF/FA), Absorbed Glass Mat Maintenance Free (AGM), and Gel (Gel Electrolyte) type batteries Read More Product Style Item # Store SKU Manufacturer Product # Availability Product Style Megaboost Pro Series 4000 Charger And Maintainer Item # 1128037 Store SKU 188672 Manufacturer Product # TE4-0225 Availability In Stock: Ships in 1-2 business days © Copyright 2021 Wakelet Limited.All rights reserved. ENGLISH MEGA-BOOST type MB-510/MB-700 The MEGA-BOOST portable power pack is designed to jump start vehicles that have discharged batteries. To gain the best use of your MEGA-BOOST please read this entire instruction sheet carefully. SAFETY DO NOT short-circuit this unit. Always observe correct polarity when connecting. Remove personal items such as rings, bracelets and watches when working with a vehicle battery. A vehicle battery can produce a short-circuit that can cause a severe burn. Use MEGA-BOOST for boosting a standard vehicle battery only. OPERATION- Vehicle starting. Always follow the vehicle manufacturer instructions for safe jump-starting. Ensure MEGA-BOOST key-switch is in the "OFF" position (all LED's are off) Switch off all lights and other loads on vehicle. Connect to the vehicle system observing correct polarity (LEDs on pack may illuminate. This does not indicate state of charge or a fault.) If polarity is wrong a buzzer will sound, reconnect correctly. Always reassure connection is right even when buzzer does not sound. Switch on MEGA-BOOST by turning the key-switch to the "ON" position, the LED's will now turn on, make sure cables are free of turning parts of engine and start engine, if engine does not start within ten seconds, stop and wait a few minutes before making a further attempt. After engine has started, FIRST switch off the MEGA-BOOST by turning the key-switch to the "OFF" position, then remove the negative clamp (black) and then the positive clamp (red) and store the clamps in the clamp compartment of the MEGA-BOOST. SPIKE PROTECTION The MEGA-BOOST has a unique spike protection system, this protection is in operation as long as the clamps are connected to the vehicle as mentioned above, even when the key-switch is in the "OFF" position. NEVER remove one of the clamps before the key-switch is in the "OFF" position. CHECK UNIT STATE OF CHARGE Ensure all cables are in the stored position. Switch on unit. LED's will indicate charge state. Switch off unit. CHARGING Charge from the mains (230 VAC 50Hz) using the MEGA-BOOST charger only. No other charger may be used; this will cause damage to the batteries. The MEGA-BOOST charger has a concentric pin plug, which connects to the female plug on the front of the MEGA-BOOST, when connected the yellow charge LED will come on. We recommend to leave the MEGA-BOOST under charge when not in use, this always ensures a fully charged battery. Never leave the MEGA-BOOST discharged at any time; this will cause permanent damage to the battery. CHARGING FROM VEHICLE The DC cigarette lighter lead is designed to connect the charge socket on the MEGA-BOOST to the standard cigarette lighter fitted to most vehicles. The MEGA-BOOST can be recharged using this lead while the vehicle engine is running. AUXILIARY POWER SOURCE The MEGA-BOOST can also be used to keep vehicles memory functions stored, when the original vehicle battery is disconnected by using the lead with the cigarette lighter plugs. DISPOSAL The battery inside the MEGA-BOOST is a sealed lead-acid battery. It is required to be removed and recycled or disposed of properly at the end of its useful life. © 1996-2014, Amazon.com, Inc. or its affiliates
